

Application No.: 10/517,488

IN THE ABSTRACT

This abstract will replace all prior versions of abstract in the application:

~~The invention relates to A toilet brush having different forms which constitute effective toilet bowl cleaning and hygiene means through the application of that applies a product that is contained inside a portion of the its body of said brush, which is squeezed by the user. The aforementioned body is hollow and made from an elastic material. Moreover, and each end of said the body it comprises an open section and each open section is protected with a cover, the outlet section also being sealed by means of a breakable membrane. The invention also comprises An arm having that has a stepped proximal end which can be screwed to the outlet of the body, thereby causing breaking the membrane to break and connecting the inside of the body with an axial hole in the arm. The axial hole consists of sections having different diameters and runs the length of the arm as far as a head portion, which is disposed situated at the distal end thereof of the arm, said head comprising and is provided with sets of bristles for cleaning operations. An extra piece can be added to the head in order to provide same it with an angular configuration shape that can be used to access to normally inaccessible, concealed areas.~~
